

Installing and Configuring Github

GITHUB is a file management system that does the following:

- a) Keeps your files in the cloud.
- b) Easily maintains different versions of your code.
- c) Great for collaboration, keeps track of everyone's changes!

We will use Github to manage the lecture files.

Step 0: Basic Setup (only do once)

1. Open a Github account by going to "github.com". Try to register with your Emory email since you sometimes get student benefits. Be careful selecting your username, this will be visible to the public.

2. Download Github Desktop from: <https://desktop.github.com/>

Follow the default options in the installation process and use your newly created Github credentials.

Step 1: Adding "QTM 151 Lecture Notes" to your account (only do once)

1. Sign-in to "Github.com" using your account credentials.
2. Go the website of the repository with the lecture notes:

<https://github.com/alejandrosanchezbecerra/qtm151spring2025>

3. Click on the "Fork Button" in the top-right corner:

4. You will be asked to make your own copy of the lecture notes. You can add any name you like. I recommend you use the name same name I used for the repository ("qtm151spring2025"):

Create a new fork

A *fork* is a copy of a repository. Forking a repository allows you to freely experiment with changes without affecting the original project.

Required fields are marked with an asterisk (*).

Owner *

Repository name *

Choose an owner ▾

/ qtm151spring2025

By default, forks are named the same as their upstream repository. You can customize the name to distinguish it further.

Description (optional)

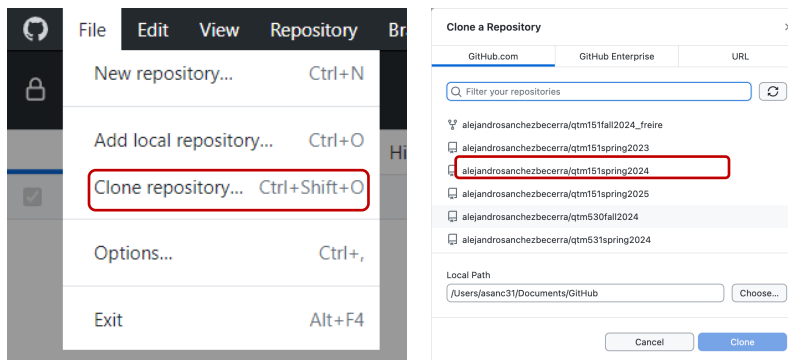

☒ Copy the `main` branch only

Contribute back to alejandrosanchezbecerra/qtm151spring2025 by adding your own branch. [Learn more.](#)

Create fork

Step 2: Downloading Lectures to your Computer (only do once)

1. Open Github Dekstop
2. Click on the “File” tab. Select the option “Clone repository”. Choose the repository you want to clone. In this case it would be the “qtm151spring2025” repository we just forked.

Notes:

The fork-like symbol means that “*ASB-classroom/qtm151spring2025*” is a repository that was forked by the user *A classrooms* (that’s my username, you should see your own username here).

- The local path is where you want to store the repository on your computer.
- Avoid storing in a subfolder of another file sharing system, e.g. “One-Drive” or “Dropbox”. Sometimes this can cause issues.
- Try to store the folder “*qtm151spring2025*” in the same location where you save the files for your other classes (as an example, I used the Emory subfolder in the Documents folder). You will need to access the *qtm151spring2025* folder often during this class, **make sure you know where you’re saving it!**

3. In the next page, SELECT the option “To contribute to the parent project”. See next picture.

How are you planning to use this fork?

You have changes on this branch. What would you like to do with them?

To contribute to the parent project

We will help you contribute to the JE-lecture-notes/qtm151_fall_2023 repository

For my own purposes

We will help you contribute to the jjestra/qtm151_fall_2023 repository

- Pull requests targeting JE-lecture-notes/qtm151_fall_2023 will be shown in the pull request list.
- Issues will be created in JE-lecture-notes/qtm151_fall_2023.
- "View on GitHub" will open JE-lecture-notes/qtm151_fall_2023 in the browser.
- New branches will be based on JE-lecture-notes/qtm151_fall_2023's default branch.
- Autocompletion of user and issues will be based on JE-lecture-notes/qtm151_fall_2023.

Continue

Cancel

Notes:

- This option allows you to keep updating your lecture notes from the instructor's repository.
- The other option creates a local copy that has no links to the original repository. If you accidentally choose this option, you won't be able to see any changes. To reverse: (a) remove the repository on your computer (by right-clicking on the repository on Github dekstop), (b) manually delete the directory, (c) go back to Step 2.

You're done! You should have access to the lecture notes.

These notes will be updated constantly! Check the next manual on how to update a repository.
